Compliance Management

“EM-Assist has provided environmental compliance management expertise to our 23,500-person installation since 1997. They have helped us improve our compliance reporting accuracy and credibility with regulatory agencies, and they have augmented our capabilities with qualified on-site technical staff.”

– Environmental Compliance Program Manager (U.S. Air Force)

EM-Assist’s compliance management services help clients succeed in an environment of complex and dynamic regulations. We provide comprehensive solutions by combining our regulatory, technical, and program management expertise with a deep understanding of client needs. By seamlessly integrating our cost-effective programs into clients’ existing business practices, we reduce clients’ risk and minimize their environmental footprint. After more than a decade of working closely with regulators, we ensure current compliance while helping clients effectively address future legal and regulatory changes. By integrating our information management and technology expertise, we manage compliance requirements, produce on-target analyses to facilitate decision-making, and provide robust recordkeeping and reporting.

- › In an **air quality** program for a major Air Force installation, our regulatory experts collaborated with state regulators to create an innovative permitting process that shortened our client’s air permitting time from as long as 12 months to as little as 7 days.
- › As part of our **program management** services, we optimized field inspection procedures across environmental media to reduce our client’s inspection management time by 70% while ensuring excellent compliance status with a record number of positive findings.
- › During our management of a **hazardous waste** program, we implemented numerous changes to improve overall program performance, saving our client more than \$1.1 million per year while reducing their annual hazardous waste generation by more than 300 tons.
- › Our **enterprise system implementation** work with the Air Force involved helping to redesign integrated environmental management software for multiple installations, which cut processing time by 70% for common transactions handled by the new system.
