Conservation & Planning

Cultural Resources

EM-Assist provides cutting edge services, products, and program support that have allowed our clients to proactively maintain compliance. We have twice helped our Cultural Resources clients win the most prestigious awards given for excellence in environmental management by the Federal Government.

## Assessment, Survey, and Investigation

We have a staff of archaeologists and anthropologists with a diverse range of specialties covering all areas of historic, archaeological, and ethnographic assessment, investigation, and research.

## Training

We develop innovative computer and Web-based learning solutions, including cultural resources awareness for varied audiences and training in federal and state cultural resources compliance procedures, including Section 106 training. Blended solutions, including classroom instruction with computer-based exercises, are among some of the services that we offer.

## Mitigation

We work with stakeholders and government agencies to conceptualize, fund, and develop custom mitigation and public outreach projects that use the power of technology to reach the widest possible audience and maximize investment returns for our clients.

## Interactive Solutions

We create award winning, interactive Websites that include virtual tours of historic and archaeological sites, as well as artifact museums. Our unique products use three dimensional recreations and photography, in addition to audio and interactive exploration, to engage the user and bring history and archaeology to life.

EM-Assist offers cultural resources solutions that facilitate compliance, satisfy mitigation agreements, fulfill training requirements, and provide innovative public outreach. Our solutions include the following:

- › Archaeological Assessments, Surveys, and Investigations
- › Consultation, Mitigation, Compliance, and Restoration Solutions
- › American Indian Consultation, Program Planning, and Implementation
- › Program Assessments
- › Management Plans
