

Custom eLearning Courseware

Training Solutions

Custom eLearning Courseware

“EM-Assist transformed our old classroom-only training program by introducing a blend of computer-based courses ranging from short, targeted topics to highly customized, in-depth lessons. Their eLearning courseware enhanced the effectiveness of our training and saved us money by reducing the time required to train our soldiers.”

– Environmental Program Manager (U.S. Army Reserve)

EM-Assist’s custom eLearning courseware provides impactful, flexible, and cost-effective training across a wide range of subjects. Our expert instructional designers are well-versed in adult learning theory and follow a proven instructional design process (Assess, Design, Develop, Implement, Evaluate) when creating our interactive Web- and computer-based courseware. Experienced multimedia developers collaborate with our instructional designers and subject matter experts to produce accessible, engaging courseware that is carefully targeted to each specific student audience.

Our custom eLearning courseware can be integrated with instructor-led training to provide a cost-effective blended learning solution that is appealing to students with a variety of learning styles.

- › While supporting an Army training project, our **instructional design** experts leveraged our multilingual capabilities to deliver computer-based course materials in English and Japanese, resulting in the adoption of our courses throughout multiple Army installations in Japan.
- › Our **interactive courseware** development for the Marine Corps included the creation of over 100 custom eLearning courses that ranged from concise, focused Rapid Learning Objects™ to complex, highly interactive custom courses, earning our client’s program accolades for innovative, effective training.
- › We used our **training technologies** expertise to produce a custom training video for use throughout the Army Reserve nationwide, and we were presented with an award recognizing the extensive collaboration we demonstrated when creating training that effectively portrayed and addressed a broad spectrum of activities.
