SharePoint® Solutions

EM-Assist understands how to harness the power of SharePoint® to enhance our clients' business productivity by increasing the efficiency of their business processes. We can navigate large-scale implementations that span your entire enterprise, or focus on specific elements impacting one particular area of your organization. Whether already deployed or still in the planning stages, EM-Assist can be a valuable partner on any SharePoint® project. Our services include the following:

- › Analyzing workflow to maximize the out-of-the-box capabilities of SharePoint®
- › Performing set-up and configuration to minimize SharePoint® implementation costs
- › Creating customized site structures and user interface elements within SharePoint®
- › Developing Web parts and other custom SharePoint® controls
- › Integrating existing legacy systems within SharePoint®
- › Implementing other third-party software and tools within SharePoint®

Our Microsoft® Certified experts design and implement SharePoint®-based solutions that go beyond simple repackaging of the out-of-the-box capabilities of SharePoint®. Starting with a complete business process analysis, our experts extend the out-of-the-box capabilities so that SharePoint® conforms to your organization's business processes rather than forcing your business processes to conform to SharePoint®. The result is a customized solution that automates work flow while making your business processes more efficient and easier to understand.

Using the robust infrastructure of SharePoint® for Web-based application development, we create custom tools that leverage the collaboration and content management capabilities of SharePoint®. We integrate existing legacy systems and other third-party software to maximize your return on past software and information technology investments. Such integration ensures continuity of access to critical data stored in other systems and can help reduce the ongoing cost of managing and maintaining your entire software portfolio.

EM-Assist utilizes SharePoint® internally to enhance its own business productivity, and we have a proven track record of successfully delivering SharePoint® solutions to our clients.

- › We are developing a SharePoint®-based project management solution for EM-Assist's protégé, an information technology company, as part of the Air Force Mentor-Protégé program.
- › We configured and deployed a SharePoint®-based Learning Management System for a National Guard client; our careful analysis and planning enabled the deployment to successfully meet stringent Department of Defense design and security requirements.
- › We designed and deployed a SharePoint® solution side-by-side with existing legacy systems for an Army Reserve client; once deployed, we provided ongoing support, adjusting SharePoint® configuration to meet our client's evolving requirements.

Business Process Analysis

EM-Assist delivers SharePoint® solutions that enhance business productivity.
